

The Changing Role of Foreign Investors in Tokyo Stock Price Formation

Kentaro Iwatsubo and Clinton Watkins
Graduate School of Economics, Kobe University

Nippon Finance Association Fall Conference

30 November 2019

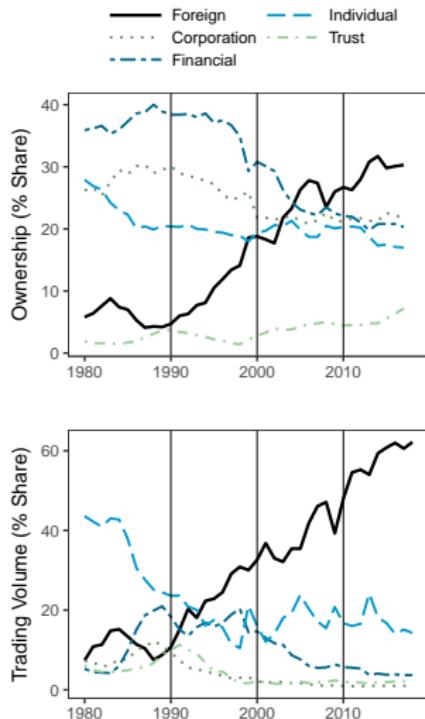

Introduction

- International stock market integration and financial liberalisation have facilitated an increase in foreign portfolio investment over recent decades.
- Foreign investors are now important participants in most local markets, especially EM.
 - Real effects (Henry, 2000a; Bekaert et al., 2005; Bekaert et al., 2011).
 - Liquidity (Bekaert et al., 2007; Rhee and Wang, 2009).
 - Volatility (Bae et al., 2004; Li et al., 2011).
 - Cost of capital (Bekaert and Harvey, 2000; Henry, 2000b).
 - Informational efficiency (Kacperczyk et al., 2018; He et al., 2013; He and Shen, 2014; Kang et al., 2016).
- However, exactly how foreign investors (FIIs) contribute to the efficiency of local markets is less well understood.
 - What types of value-relevant information do FIIs possess?
 - Have the types of information that FIIs possess changed over time as stock markets have become more internationally integrated, and if so, how?

Introduction

- FIIs may trade at an information advantage or disadvantage to locals.
 - FIIs trade at an disadvantage regarding local information (Kang and Stulz, 1997; Coval and Moskowitz, 1999), but have an advantage in global information (Bae et al., 2012; Kang et al., 2016).
 - FIIs outperform locals (Grinblatt and Keloharju, 2000; Karolyi, 2002; Kamesaka et al., 2003; Bae et al., 2006), but also underperform locals (Timmermann and Blake, 2005; Shukla and Inwegen, 1995; Choe et al., 2005).
 - National equity risk premia are internationally determined while the cross-section of stock returns likely is not (Karolyi and Stulz, 2003).
 - International stock market integration has increased local return correlations (Longin and Solnik, 1995; Christoffersen et al., 2012)
- What is the role of FIIs in all of this?

Why Study the Role of FIs in Japanese Stocks?

- Unique for a developed market, FI share of ownership and trade has increased substantially since the 1980s.
- Long publicly available time series of transactions classified by investor type.
- Transactions are more closely related to efficiency than ownership (Boehmer and Kelley, 2009).
- Provide insight for other developed markets and complement the existing evidence on emerging markets.

Main Findings

1. **FIs are informed**, while domestic financial, trust and individual investors are uninformed.
 - FI's influence over the efficient price has **increased since around 2000**.
2. However, the increase in FI's information share is due to a substantial **increase in the importance of global stock price and exchange rate information** for the efficient price of Japanese stocks.
 - **Global stock prices** have become more important since around 2000, while the **exchange rate** is important in the 2010s.
3. FIs have shifted toward trading equities based on global information, as **international financial factors** have increasingly influenced the domestic market in recent decades.

Modelling Approach

- We modify Hasbrouck's (1991) "information content of trade" approach to identify the influence of foreign and domestic investors' trades on the efficient price, as well as the importance of public information.
 - VAR model of transactions and returns series.
 - Block-recursive identification.
- Benchmark model endogenous variables:
 - Transactions of four investor groups: FIIs, domestic financial institutions, investment trusts, individual investors.
 - Public information represented by the TOPIX index.
- We compare the benchmark model to models including:
 - Global stock price information: S&P 500.
 - Foreign exchange rate information: USD/JPY.
 - Fundamental stock price information: forecast earnings per share.

Modelling the Efficient Price (Hasbrouck, 1991)

- The price of a security, p_t , may be decomposed into the efficient price, m_t , and mispricing, s_t :

$$p_t = m_t + s_t$$

$$m_t = m_{t-1} + \omega_t$$

where m_t follows a random walk process, s_t is a mean-zero covariance stationary process.

- The shock to the efficient price (ω_t) has a permanent influence on the security's price, while that to mispricing (s_t) has only a temporary effect.
- Investors' transactions affect the permanent component (ω_t) and mispricing (s_t).
- Investor groups having a positive long-run price impact (CIRF) and a substantial influence on the efficient price (σ_ω^2 , variance decomposition of the efficient price) are considered informed traders.

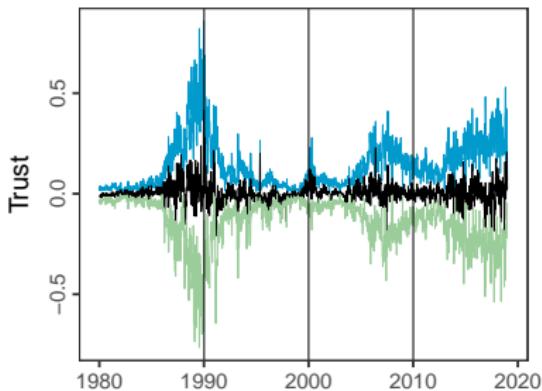

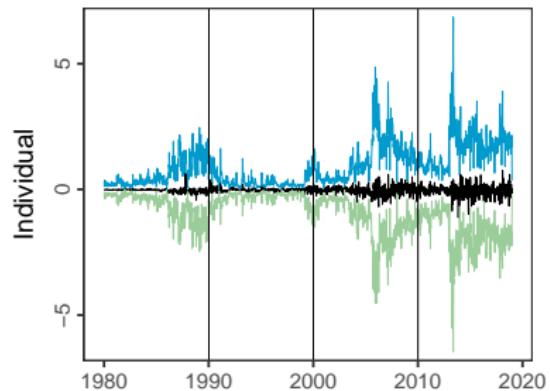

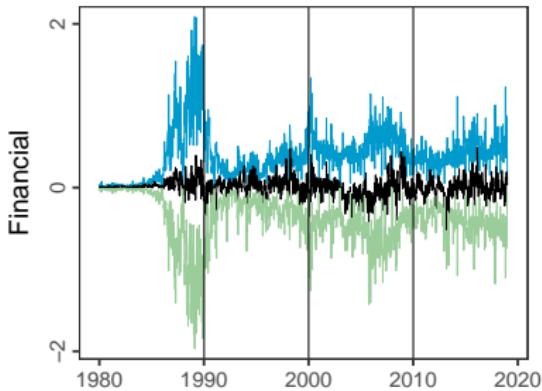

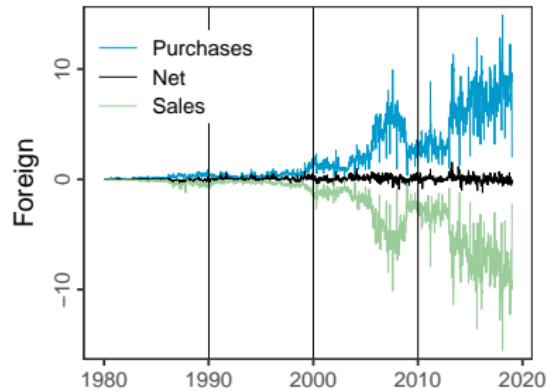

Transactions and Returns Data

- Sample: Weekly from January 1980 to December 2018, divided into four subsamples for the 1980s, 1990s, 2000s and 2010s.
- Transactions:
 - The value of purchases ($B_{g,t}$) and sales ($S_{g,t}$) by different groups of investors ($g = 1, \dots, 4$).
 - We use four investor groups (g) in our analysis: foreign, individual, investment, and financials.
 - Transactions in stocks that are listed on the 1st Section of the Tokyo Stock Exchange.
- Construct a trade Ratio ($x_{g,t}$) for each investor group:

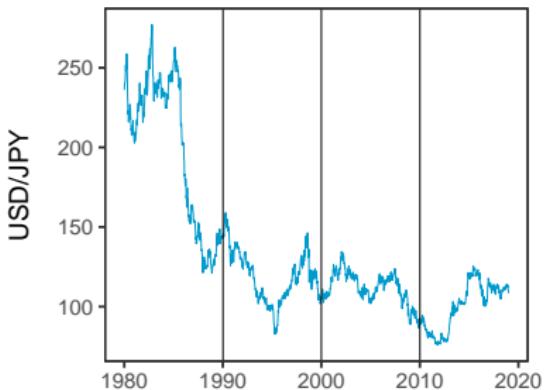

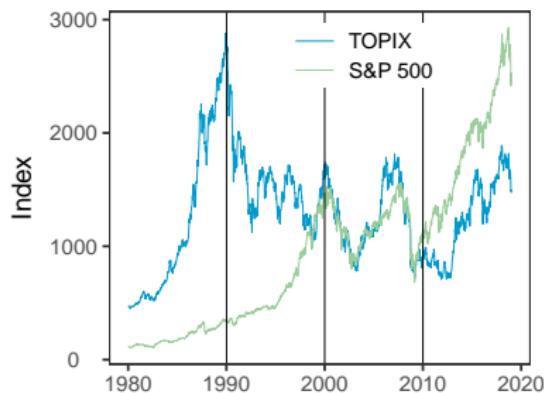

$$x_{g,t} = \log \left(\frac{B_{g,t}}{S_{g,t}} \right)$$

- Returns:
 - Weekly logarithmic return of TOPIX, S&P500 and USD/JPY.
 - Percentage change in forecast earnings per share (FEPS) calculated using NIKKEI forecast P/E ratio.

Transactions (weekly, yen trillions, sales negative)

Equity Index and Exchange Rate Data (weekly)

Conclusion

- Using Hasbrouck's information content of trade methodology with TSE transactions and domestic and foreign returns information, we support the evidence that foreign investors improve the informational efficiency of Japanese stock prices.
- The increase in the influence of FI's trades on the efficient price is due to a substantial increase in the importance of global stock price and exchange rate information in stock price formation.
- As international financial factors increased in importance in the domestic market in recent decades, it appears that FI's have changed their trading strategy from forecasting domestic fundamentals to global financial factors.

Thank you

Clinton Watkins
